The CE mark guarantees that a product is safe to use and complies with all safety precautions. CE stands for *Conformité Européenne* (European Conformity) and is mainly found on electronic equipment, safety equipment, construction products, and medical devices.

Third-party type approval is required for all Category III personal protective equipment (PPE) products. CAT III products will be accompanied by a notified body number for the 3rd party verification of the product’s safety.

The standard specifies a method for testing gloves to determine whether the glove provides resistance to the permeation of chemicals and/or microorganisms. The test consists of an air and water test to identify leaks in the glove. They follow the ISO 2859 sampling plan. Not all gloves can be tested with air. In this case a water test is used.

The standard specifies the requirements for protective gloves in relation to general requirements and test methods.

The standard specifies the requirements for protective gloves against mechanical risks. This glove is a slightly wear-resistant glove.

The standard specifies the requirements for protective gloves against mechanical risks.

The standard specifies the requirements for protective gloves against chemicals and microorganisms.
